Introduction

This is my proposal that will be showing the brainstorming and planning of creating a website and how different businesses are advertised and a multiple step plan which requires lengthy research that is then constructed and referenced in this proposal

Proposal 1: S.I.C (Sport in Cinema)

1. Organisation Overview

- Name: S.I.C (Sport in Cinema)

S.I.C is a venture idea that proposes collaboration with Ster-Kinekor (the largest cinema operator in South Africa with 47 cinemas across the country (Ster-Kinekor, n.d.) to showcase live sport from live broadcasts of, for example, Formula 1, Football, etc on their cinema screens. It is the proposal's response to the significant drop in theatre viewing due to home streaming, load-shedding and the general tight budgets in households. It seeks to compliment sports Broadcaster and provide a communal 'big-screen' watching alternative by using vacant screens during non-viewing times, to screen live sporting events at Ster Kinekor complexes around the country (BusinessTech, 2024; Cape Argus, 2025) .

Mission

Our Goal: Make it the "go-to spot again by offering something better than home viewing for live Sports. Big screen + big-picture environment = a shared emotional (and likely alcoholic) experience we like to call cinema.

Vision

To become the go-to South African venue for watching major sporting events outside of stadiums and sports bars.

Target Audience

- Motorsport and football fans aged 18–40 who want a social viewing experience.
- Friend groups and supporters' clubs looking for a venue for match days and race weekends.
- Cinema-goers seeking new reasons to return to Ster-Kinekor outlets.

2. Website Goals and Objectives

- Drive ticket sales for scheduled sport screenings (F1 races, football fixtures).
- Build awareness of the S.I.C concept and its Ster-Kinekor partnership.
- Allow fans to view the fixture schedule and select a cinema location.

Key Performance Indicators

- Number of online ticket bookings per month.
- Website traffic and average session duration on the fixtures page.

- Enquiry form submissions from prospective sponsors or supporters' clubs.

3. Current Website Analysis

The site is being developed for a new business and currently doesn't have a web presence, so it will be developed from scratch taking on board best practice from cinema booking sites and sport streaming sites.

The reason why this website is created is:

- Give more information for curious customers
- Advertisement
- Bookings for the experience

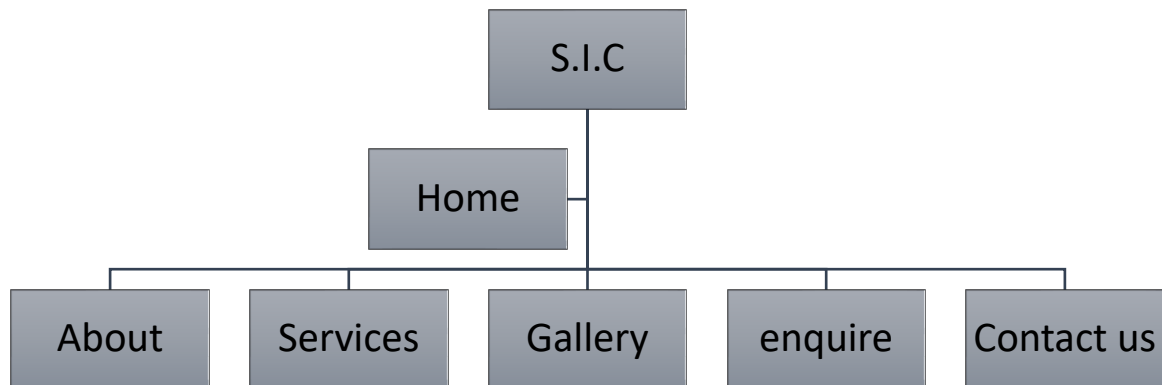

4. Proposed Website Features and Functionality

- Homepage: hero banner, upcoming fixtures, call to action to book.
- About Us: concept explanation and the Ster-Kinekor partnership.
- Fixtures/Services page: schedule of upcoming F1 and football screenings by cinema location.
- Enquiry page: form for sponsorship, group bookings, and supporters' club partnerships.
- Contact page: cinema locations map (multiple sites) and contact form.

5. Design and User Experience

- Colour Scheme: Ster-Kinekor red and charcoal black, with an electric blue accent for sport energy.
- Typography: bold sans-serif headings (Montserrat) for an energetic, stadium feel; clean sans-serif body text (Open Sans) for readability.
- Layout and Design: dark, high-contrast layout similar to sport broadcast graphics, with large fixture cards and prominent booking buttons.
- These colors and patterns will create a familiar feel for users which make them more inclined to use the platform.

Key user experience factors will involve a 3 click process from the homepage to booking, sticky navigation and a mobile-first design in order to facilitate the majority of fans viewing fixture information on their mobile phones. Homepage, fixtures and contact page wireframes will be created at a low-fidelity to demonstrate this layout and information hierarchy before any HTML is created.

6. Technical Requirements

- Hosting: shared hosting package (e.g. Afrihost or Xneelo) sufficient for a five-page static site.
- Domain: sicinema.co.za (.co.za domain).
- Languages/Frameworks: HTML5, CSS3, and vanilla JavaScript for interactivity (e.g. fixture filtering).

7. Timeline and Milestones

- 7–13 August 2026: Finalise proposal and secure lecturer approval.
- 14 August 2026: Part 1 (Project Initiation and Planning) submitted.
- Part 2 (Design, wireframes, and HTML build): to follow per the module guide.
- Part 3 (Testing, refinement, and final submission): to follow per the module guide.

8. Budget

- Domain registration (.co.za, 1 year): approximately R150.
- Shared web hosting (1 year): approximately R1,200 (≈R100/month).
- Estimated total for the academic project: approximately R1,850.

This is an attempt to adapt into the project for a school portfolio, though a real life world-wide launch would even include Ster-Kinekor Broadcast rights budget/partnership budget that we do not plan to have for this task.
